

Virginia Graeme Baker Pool and Spa Safety Act Compliance Crib Sheet

The Virginia Graeme Baker Pool and Spa Safety Act requires all public swimming pools, wading pools and spas to be fitted with drain covers meeting the ASME/ANSI A112.19.8 Standard. The Standard further requires the drain covers to be installed on sumps meeting the cover manufacturer's specifications and that each drain on a single or double-drain pool must safely handle the full flow of the pump system. For pools with three or more drains on a pump system, the drains must safely handle the pump system flow with one drain completely blocked.

To verify the drain covers can safely handle the pump flow, the drain cover flow rating must exceed the maximum pump system flow. This chart gives the maximum pump flow for a variety of pumps. The pump system flow will be less than the maximum pump flow because of resistance to flow within the circulation system. That resistance can be measured and used to determine the pump system flow, but that will not be necessary if you can verify the cover/grate is rated to safely handle the maximum pump flow. This chart could contain errors, so pool owners are advised to verify the flow rates.

Maximum Pump Flows

Brand	Model Number	Horsepower	Maximum Flow
Hayward Booster Pump	6060		43 GPM
Hayward Northstar	SP4005NS	0.5 HP	88 GPM
Hayward Northstar	SP4007NS	0.75 HP	100 GPM
